- The system will time each bug by recording submission date, assigning date, and resolution date.

- The system will allow a PM to create and administer a project.

- The system will allow a PM to add & remove team members.

- The system will allow a PM to tag bugs as they see fit. A tag differs from a category in that a tag is not predefined not limited to certain values. The efficacy of tags lies in the PM's implementations. Tags can (and should) be more specific than the category.

- The system will have profile pages for projects, bugs, people

- A bug may fork into several bugs which the system must track
